

1  
2 Remarks

3 Amendments to the claims

4 Claims 21-40 are added. Claims 1, 9 and 17 have been amended, as indicated  
5 above. Support for the amendment is found in the specification and drawings as follows:

- 6 • Claims 1, 9 and 17: page 4, lines 1-3  
7 • Claims 21, 29 and 37: page 5, lines 10-19, page 7, line 15 to page 8, line 15

8 No new matter has been added to the claims.

9 The amendments made herein are for the sole purpose of facilitating an  
10 understanding of the differences between the Applicant's claimed invention and the prior  
11 art, and are not to be considered as an admission that the prior art anticipated or  
12 rendered obvious the amended claims.

13  
14 Rejection of Claims under 35 U.S.C. § 102

15 Claims 1-20 have been rejected under 35 U.S.C. § 102(b) as being anticipated by  
16 U.S. Patent No. 5,781,720 to Parker et al. (hereinafter, "Parker").

17 The Applicants respectfully disagree that claims 1-20 are anticipated by Parker.

18 As a starting point, the PTO and the Federal Circuit provide that §102 anticipation  
19 requires each and every element of the claimed invention to be disclosed in a single  
20 prior art reference. (*In re Spada*, 911 F.2d 705, 15 USPQ2d 1655 (Fed. Cir. 1990)).

21 The corollary of this rule is that the absence from a cited §102 reference of any claimed  
22 element negates the anticipation. (*Kloster Speedsteel AB, et al v. Crucible, Inc., et al*,  
23 793 F.2d 1565, 230 USPQ 81 (Fed. Cir. 1986)). Furthermore, "[a]nticipation requires  
24 that all of the elements and limitations of the claims are found within a single prior art  
25 reference." (*Scripps Clinic and Research Found. v Genetech. Inc.*, 927 F.2d 1565,  
1576, 18 U.S.P.Q.2d 1001, 1010 (Fed. Cir. 1991 (emphasis added))). Moreover, the  
PTO and the Federal Circuit provide that §102 anticipation requires that there must be

1 no difference between the claimed invention and the reference disclosure. (*Scripps*  
2 *Clinic and Research Found. v. Genetech, Inc.*, id. (emphasis added)).

3 Accordingly, if the Applicants can demonstrate that any one element or limitation  
4 in claims 1-20 is not disclosed by Parker, then the respective claim(s) must be allowed.

5 In the following arguments, the Applicants will focus in particular on independent  
6 claims 1, 9 and 17, as the Applicants believe those claims to be allowable over Parker.  
7 It is axiomatic that any dependent claim which depends from an allowable base claim is  
8 also allowable, and therefore the Applicants do not believe it is necessary to present  
9 arguments in favor of each and every dependent claim. The fact that the Applicants  
10 have not presented herein specific arguments in favor of the allowability of each and  
11 every dependent claim which depends from arguably allowable independent claim is not  
12 to be considered as an admission that the dependent claims are only allowable as a  
13 result of their dependence on an allowable base claim, but rather as a matter of  
14 efficiency in responding to the instant Office action. The Applicants make no concession  
15 nor admission that any dependent claim is allowable based solely on its dependence  
16 from an allowable base claim.

17  
18 Claim 1

19 The Applicant contends that independent claim 1, and rejected claims 2-8 that  
20 depend therefrom, are not anticipated by Parker. Claim 1 (as amended above) recites:

21  
22 (Continued on next page.)  
23  
24  
25

1 Claim 1

2 A method for automated testing of a graphical user interface (GUI) of a  
3 program, said method comprising:

4 creating a test case file comprising a plurality of test steps in a text  
5 format wherein the test steps are not written in an interpreted computer  
6 programming language; and

7 executing a test harness with said test case file as input to said test  
8 harness, said test harness configured to execute one of a plurality of automated  
9 tests in response to one of a plurality of test steps, each automated test  
10 configured to test a corresponding user interface element of said program  
11 through a GUI map, said GUI map configured to define a logical name for each  
12 user interface element of said program.

13 The Office action states that Parker discloses "a plurality of test steps in a text  
14 format," which the Office action further claims is a script. Parker discloses that a test  
15 script "is **written in a high level programming language** and contains the user events  
16 to be simulated, and the **control and data structures** necessary to validate the GUI's,  
17 and in turn, the application program's responses to the input." (Parker, col. 4, lines 7-11.)  
18 Furthermore, Parker discloses that "[i]n the preferred embodiment, the test script is  
19 written in a portable language called "T", developed by, and available from the assignee  
20 of the present invention. The "T" language is not required to practice the present  
21 invention and **any other appropriate programming language such as C** can be used.  
22 The name T is intended to indicate that it is like C, but designed expressly for Testing.  
23 The T language **is a full-featured programming language** with a compiler and a full  
24 range of control and data structures." (Parker, col. 6, line 66 to col. 7, line 8; emphasis  
25 added.)

The method taught by Parker destroys the purpose of Applicant's invention. A  
script file created with a full-featured programming language is the opposite of "a  
plurality of test steps in a text format wherein the test steps are not written in an

1 interpreted computer programming language", as is required by Applicants' claim 1. A  
2 test script, according to Parker, requires control and data structures, and is thus written  
3 in a proprietary high-level language. The Applicants state in the specification that the  
4 claimed "test case file" contains an "English-like" description of each step of a testing  
5 scenario (Application, page 12, line 6-7). The use of a proprietary high-level  
6 programming language is clearly not required to "create a test case file comprising a  
7 plurality of test steps in a text format wherein the test steps are not written in an  
8 interpreted computer programming language" (per Applicants' claim 1) where the steps  
9 are in "English-like" text. Rather, a simple text editor or word processing program can be  
10 used to create the test case file. (Application, page 8, line 22-23). In fact, the ability to  
11 "create a test case file comprising a plurality of test steps in a text format wherein the  
12 test steps are not written in an interpreted computer programming language" (Applicants'  
13 claim 1) advances the art by negating the use of a script written in a high-level  
14 programming language, as required by Parker. Therefore, Parker cannot anticipate  
15 Applicant's invention, since Parker requires the use of a script written in an interpreted  
16 computer programming language

17  
18 The Applicants clearly distinguish a "test case file in a text format" from a "script",  
19 as is evident from the discussion of "automated test scripts" within portions of the test  
20 harness, as set forth in the Applicants' specification (Application, page 10, lines 4-12,  
21 and Fig. 6).

22 Finally, using a test script that "contains the user events to be simulated, and the  
23 control and data structures necessary to validate the GUI's, and in turn, the application  
24 program's responses to the input" (per Parker), is far different than "creating a test case  
25 file comprising a plurality of test steps in a text format wherein the test steps are not  
written in an interpreted computer programming language" (per Applicants' claim 1). In  
fact, Parker teaches away from "creating a test case file comprising a plurality of test

1 steps in a text format wherein the test steps are not written in an interpreted computer  
2 programming language", since the invention of Parker is non-functional without the use  
3 of a script written in an interpreted computer programming language.

4 For at least these reasons, the Applicants contend that Parker does not anticipate  
5 Applicants' claim 1.

6 The 35 U.S.C. § 102 rejection of claim 1 is thus unsupportable in view of the  
7 requirements for such a rejection as described above. Thus, the Applicants contend that  
8 claim 1 is allowable. As claim 1 is allowable, claims 3-8 are allowable by virtue of their  
9 dependence upon an allowable base claim, as well as their own respective merits.

10  
11 Claim 9

12 The Applicants contends that independent claim 9, and rejected claims 10-16 that  
13 depend therefrom, are not anticipated by Parker. Claim 9 (as amended above) recites:

14  
15 A system for automated testing of a graphical user interface (GUI) of an  
16 application, said system comprising:

17 at least one processor;

18 a memory coupled to said at least one processor;

19 a test harness residing in said memory and executed by said at least one  
20 processor, wherein said test harness is configured to execute one of a plurality of  
21 automated tests in response to one of a plurality of test steps of a text format test  
22 data file wherein the test steps of the text format test data file are not written in an  
23 interpreted computer programming language, each automated test configured to  
24 test a corresponding user interface element of said application through a GUI  
25 map, said GUI map configured to define a logical name for each user interface  
element of said application.

For at least the reasons described above with respect to Claim 1, the Applicants  
contend that Parker does not anticipate Applicants' claim 9, as claim 9 includes (at least)

1 the limitation of, "a text format test data file wherein the test steps of the text format test  
2 data file are not written in an interpreted computer programming language", which is not  
3 disclosed by Parker (as discussed above). The 35 U.S.C. § 102 rejection of claim 9 is  
4 thus unsupportable in view of the requirements for such a rejection as described above.  
5 Thus, the Applicants contend that claim 9 is allowable. As claim 9 is allowable, claims  
6 10-16 are allowable by virtue of their dependence upon an allowable base claim, as well  
7 as their own respective merits.

8  
9 Claim 17

10 The Applicants contend that independent claim 17, and rejected claims 18-20  
11 that depend therefrom, are not anticipated by Parker. Claim 17 (as amended above)  
12 recites:

13  
14 A computer readable storage medium on which is embedded one or more  
15 computer programs, said one or more computer programs implementing a  
16 method for automated testing of a graphical user interface (GUI) of an  
17 application, said one or more computer programs comprising a set of instructions  
18 for:

19 creating a test case file comprising a plurality of test steps in a text format  
20 wherein the test steps are not written in an interpreted computer programming  
21 language; and

22 executing a test harness with said test case file as input to said test  
23 harness, said test harness configured to execute one of a plurality of automated  
24 tests in response to one of a plurality of test steps, each automated test  
25 configured to test a corresponding user interface element of said program  
through a GUI map, said GUI map configured to define a logical name for each  
user interface element of said program.

For at least the reasons described above with reference to Claim 1, the  
Applicants contend that Parker does not anticipate Applicants' claim 17. Specifically,

1 and as described above, Parker does not disclose, "creating a test case file comprising a  
2 plurality of test steps in a text format wherein the test steps are not written in an  
3 interpreted computer programming language", as required by Applicants' claim 17. The  
4 35 U.S.C. § 102 rejection of claim 17 is thus unsupportable in view of the requirements  
5 for such a rejection as described above. Thus, the Applicants contend that claim 17 is  
6 allowable. As claim 17 is allowable, claims 18-20 are allowable by virtue of their  
7 dependence upon an allowable base claim, as well as their own respective merits.

8  
9 Summary

10 The Applicants believes that this response constitutes a full and complete  
11 response to the Office action, and therefore request timely allowance of claims 1  
12 through 40.

13 The Examiner is respectfully requested to contact the below-signed  
14 representative if the Examiner believes this will facilitate prosecution toward  
15 allowance of the claims.

16  
17 Respectfully submitted,

18 Donald Moreaux, Cary Homer, Steven  
19 Stubbs, and Kent Johnson
